

Jobs to be done

Pakistan Housing Calculator
KnowledgeCity

Prepared for Taimoor Ali 13 October 2026

Executive summary

This report connects the calculator to ten user jobs. The priorities are understanding repayments, upfront equity and future rates, with accessible role guidance, English and Urdu presentation, and quick principal adjustments.

Key findings

Status: UAT feedback approved for implementation 13 October 2026; verified locally; cloud checks pending.

J1 | Prospective borrower | When I am exploring a housing-finance scenario, I want to enter a permitted property and borrowing amount, so I can estimate financing within the calculator's scheme limits.

J2 | Prospective borrower | When I compare loan tenures, I want to understand initial and later monthly payments, so I can judge the long-term commitment.

J3 | Prospective borrower / family adviser | When I plan upfront funds, I want to see estimated equity and project cost, so I can understand the cash contribution implied by my loan.

J4 | All public roles | When I inspect the repayment plan, I want yearly payment and balance figures, so I can understand how debt reduces.

J5 | Family / housing-finance adviser | When I explain a scenario to someone else, I want clear assumptions and limitations, so I can avoid presenting estimates as bank guarantees.

J6 | All public roles | When I use a phone or keyboard, I want readable and accessible controls, so I can calculate without assistance.

J7 | All public roles | When I enter financial scenarios online, I want local calculations and safe handling of inputs, so I can use the calculator without submitting personal financial records.

J8 | All public roles | When I help with a housing-finance decision, I want role-appropriate guidance, so I can focus on the information relevant to my situation.

J9 | All public roles | When I prefer Urdu, I want to switch language without losing my scenario, so I can understand the same estimate in my preferred language.

J10 | Prospective borrower | When I compare borrowing amounts, I want a principal slider, so I can adjust the loan quickly.
